Make cylinder of A

Glue B

Glue C
First dry-fit part C to determine correct diameter. Next, glue LC

Make antennadish and glue to B with overlapping part of dish over the orange triangle.

Glue struts onto place. Remember where to score.

For added detail, push in a pin. First roll up F, into a solid cylinder.

Do not score this line!

Glue overlapping part of dish on orange triangle.

Cut out on dotted line and glue onto cardstock, then cut out struts individually. Before gluing to satellite, score along green lines.

Roll-up F to make a solid cylinder, approx. 4 mm diam. If cardstock is too thick, take thinner paper and make F 30% longer.
